HPCE DYNAMIS 300+/UNLOADER VALVE COMPLETE WITH FITTINGS

Product group: **436** Product number: **1005053**

The Unloader valve is engineered to maintain safe operating pressure. When the maximum pressure is exceeded or the spray gun handle is closed, the unloader valve redirects water through a bypass connector back to the pump, effectively managing system pressure.

If the spray gun remains idle while the pump runs, the inline pressure is automatically diverted through the unloader valve. This safety mechanism protects both the operator and the equipment from potential damage.

Product information

Benefits

- **Effective Pressure Management for Safety**: The unloader valve automatically redirects water through the bypass to the pump when the spray gun is idle or closed, ensuring safe operating pressure and protecting both the operator and equipment from damage.
- **Durable Construction**: Assembly equipped with a high-pressure-proof compensation and compact construction.
